"I've never been so excited. I've been asking people to make this product for me for years. I'm all in!"

- Brandon Sirrine, Solar Goat

Peel, place and press!

1. Locate the hole and break the adhesive seal on the shingle course just wide enough to fit the 4-inch wide QuickPATCH™.

2. Remove the paper and insert the patch under the shingle. Orient the patch metal side up, with the butyl strip toward the shingle's broken adhesive seal.

3. Push the patch under the shingle until it covers the hole and sits flush with the bottom edge of the shingle course.

4. Press the shingle course back down. Then, step on and press the patch area with even pressure to engage the butyl and reseal the adhesive STRIP.
